

VENTILATORS – MAJOR DESIGN STEPS

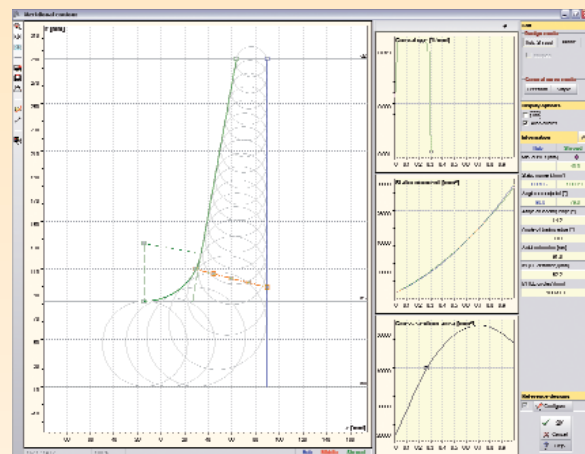

1. Main dimensions

- Computation of the ventilator impeller main dimensions: hub diameter, suction diameter, impeller diameter, outlet width
- Use of built-in or user-defined approximation functions for determination of pump parameters

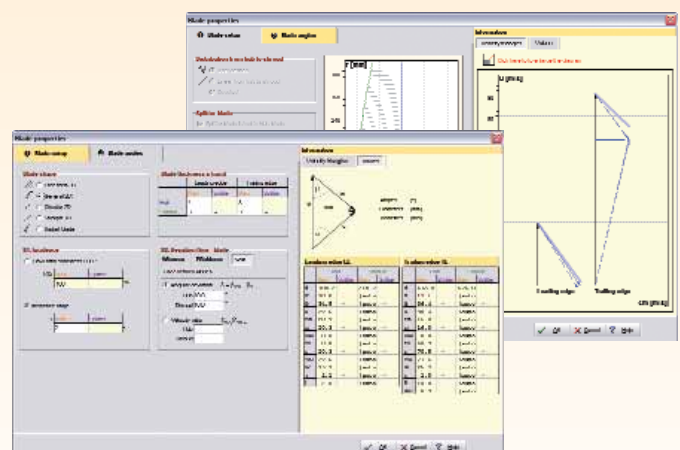

2. Meridional contour

- Design of meridional contour by Bezier-splines, arcs and lines or user-defined polylines
- Positioning of straight or curved leading edge
- Display information pertaining to important geometrical parameters

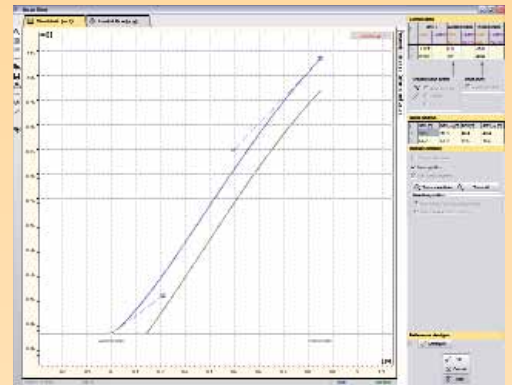

3. Blade angles

- Selecting blade shape: Free form 3D, General 2D, Circular 2D, Straight 2D, Ruled surface blades, Radial element blades
- Blade design on 2 to 11 meridional flow sections
- Computation of optimal blade angles considering the contraction of the flow channel and the slip factor
- Display velocity triangles and tabular listing of velocity components and flow angles

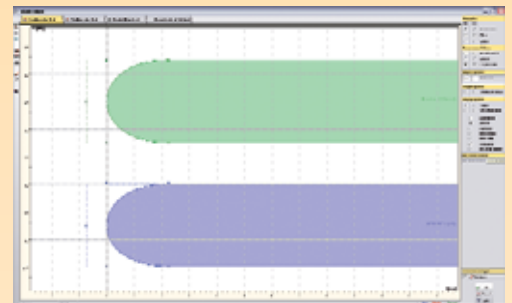

4. Mean lines

- Definition of mean lines by Bezier-splines or user-defined polylines
- Coupled or non-coupled manipulation of blade shape
- Free choice to determine the wrap angle
- Display of blade angle distributions

5. Blade profiles, leading edges

- Specification of blade thickness on all profile sections
- Round leading edges by Bezier-splines or ellipses
- Display of designed impeller in frontal view

6. 3D-views

- Dynamic 3D-representation (rotate, move, zoom)
- Partial views
- Cutting plane
- Assembly view

7. Data export

- Neutral formats like IGES, STEP, DXF
- Direct interfaces to major CAD- and CAE/CFD-systems
- Special export formats available on customer request

8. Performance map estimation

- Computation of fundamental losses for impeller and volute by proven empirical relations
- Performance curve display for different speed
- Various possibilities to set-up and to show relevant values on diagram
